

# WEEK 3 — Decisions and Loops

---

- In your spare time, write a program:
  - Generate random number between 1–10. (Ask AI)
  - User guesses until correct.
  - Give feedback “Too high” / “Too low.”
  - Try to guide the user to the correct number.

# Week 5 - File I/O and Error Handling

---

- In your spare time, write a program:
  - Takes name and age from many users.
  - Does this in a loop, and asks to terminate or continue.
  - Stores data for all users in a dictionary
  - Writes all the data to a .csv file.
  - With Exception Handling.

# Week 6 - Algorithms

---

- Homework.
- Implement selection sort in Python.

# WEEK 2 — Data Types and Expressions

---

- Using `input()` function, take the name, age and occupation of the user, cast (change) the data types and print it using f-string.
- Put them in a list.
